

Comercial Mecanica Tamegar S.L. Is a company with more than 25 years of experience in industrial machining field. Machines of the company work in many countries all around the world.

«We decided to opt SprutCAM program for the machining of our parts because of its simple handling and its acceptance of a wide range of drawing formats and a great variety of post processors being thus compatible with all our machining centers and being able to optimize our costs in production.»

«Due to the multitude of possible variants of tool attacks that the program has, we have managed to obtain the one that adapts better than the others to our way of machining. With an excellent technical service behind it, we have greatly facilitated way of mechanizing in our company.»

The pictures above are the examples of machining where the molds are shown as the final result of each of them.
