# SprutCAM for hobbyist and self- made CNC machine

Alex from Australia is a hobbyist and chosen SprutCAM for his self-made milling machine.

«I'm Alex, an automation/robotics engineer. I'm also an avid machining hobbyist, I enjoy designing, building and problem solving.

Like many others I've built my own CNC milling machine.

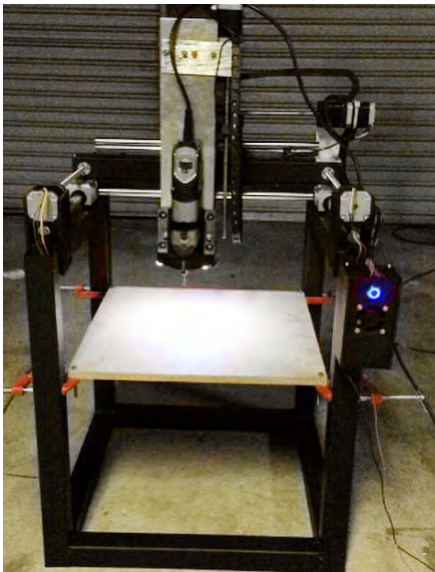

In terms of CAM software,

SprutCAM has been fantastic. It's intuitive, adaptive and most importantly quick to go from model to gcode.

It's allowed me to import a model of my own self-designed mill so simulations are more realistic. I've been able to customize the post processor in order to output for the TinyG controller. It's allowed me to quickly and easily

machine parts for many projects!

I believe SprutCAM is fantastic for hobbyists, with an abundance of tutorials and videos, it's easy for anyone to take their model to a machined part!»
